Case 8d30f26f711c | domain

Generated 2026-10-17T02:23:23+00:00

Report d660f57d162c49ac

Local investigative record. May contain sensitive public or file metadata. Share only after reviewing contents.

A matching username, HTTP response, or source claim does not establish a person's identity. VERIFIED means the recorded observation matches the consulted source.

Source collection results; unavailable sources are listed explicitly.

# 01 / Executive summary

Case state: DONE. 22 evidence records across 3 categories. Figures are computed from the database, never from AI.

| Status | Records |
|---|---|
| CANDIDATE | 7 |
| VERIFIED | 15 |

# 02 / Methodology and scope

Selected modules: dns, rdap, ct

Collection began: 2026-10-17T02:22:55+00:00

Single target, no recursive expansion. Public-source lookups use bounded requests; web/TLS modules make direct requests only when selected. Local metadata stays local. Tool output is classified as observation/candidate, never automatic identity attribution.

Source gaps, historical records, soft-404 pages, rate limits and mutable metadata can reduce coverage. No exhaustive search or identity verification is implied.

| Module / version | State | Window (UTC) |

# 03 / Evidence overview

Category counts

Status counts

Timeline omitted: evidence spans fewer than two collection dates.

## 04 / Source-backed relationships

Edges below connect source to recorded observation only. No person-to-person or cross-profile ownership relationship is inferred.

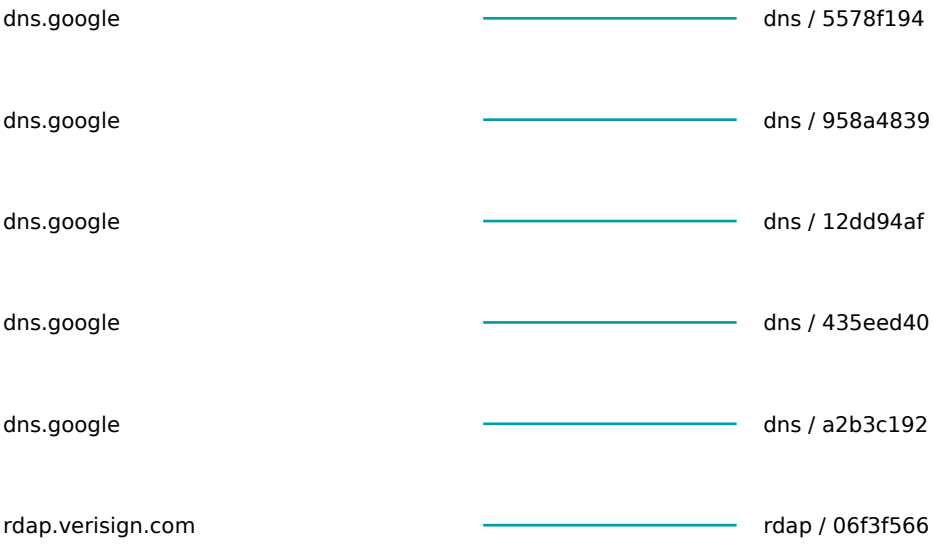

Diagram shows at most six source-observation edges; complete references follow.

# 06 / Observations and limitations

The register documents source observations at collection time. CANDIDATE records require manual review. FAILED_SOURCE records represent coverage gaps. An empty response is not a verified negative. Country/ASN registration fields do not locate a person.

JSON companion preserves raw source payloads separately from normalized fields; CSV supplies a formula-safe flattened register.
