Generated 2026-10-17T02:23:40+00:00

Report a97f093a8bad4f3e

Local investigative record. May contain sensitive public or file metadata. Share only after reviewing contents.

A matching username, HTTP response, or source claim does not establish a person's identity. VERIFIED means the recorded observation matches the consulted source.

Source collection results; unavailable sources are listed explicitly.

01 / Executive summary

Case state: DONE. 11 evidence records across 2 categories. Figures are computed from the database, never from AI.

Status	Records
VERIFIED	11

02 / Methodology and scope

Selected modules: rdap, asn

Collection began: 2026-10-17T02:23:23+00:00

Single target, no recursive expansion. Public-source lookups use bounded requests; web/TLS modules make direct requests only when selected. Local metadata stays local. Tool output is classified as observation/candidate, never automatic identity attribution.

Source gaps, historical records, soft-404 pages, rate limits and mutable metadata can reduce coverage. No exhaustive search or identity verification is implied.

Module / version	State	Window (UTC)

03 / Evidence overview

Category counts

Status counts

Timeline omitted: evidence spans fewer than two collection dates.

04 / Source-backed relationships

Edges below connect source to recorded observation only. No person-to-person or cross-profile ownership relationship is inferred.

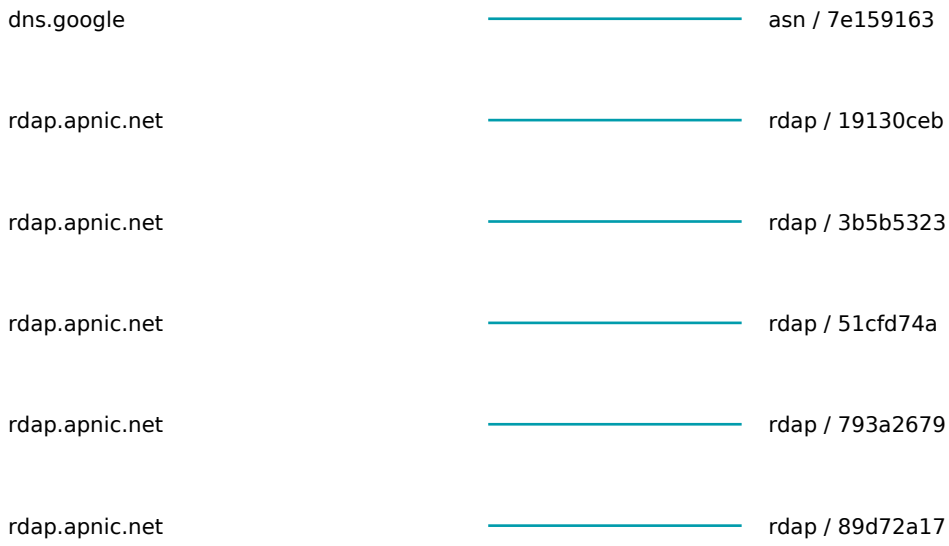

Diagram shows at most six source-observation edges; complete references follow.

06 / Observations and limitations

The register documents source observations at collection time. CANDIDATE records require manual review. FAILED_SOURCE records represent coverage gaps. An empty response is not a verified negative. Country/ASN registration fields do not locate a person.
